PRODUCT DESCRIPTION

The H1100-Fi-EC-N (polypropylene core) and H1100A-Fi-EC-N (aluminum core) heat recovery ventilator provides up to 1170 cubic feet per minute (550 L/s) of fresh outdoor air while exhausting an equivalent amount of stale indoor air, creating a well-balanced ventilation system. The highly efficient and quiet variable-speed EC motors use on average 80% less electricity of the H1100-Fi-N and H1100A-Fi-N at low speed, significantly increasing return on investment.

These ventilators are recommended for midsized non-residential spaces or dedicated zones within larger buildings such as classrooms, common areas of residential complexes and indoor parking garages.

Designed for versatile indoor installation, Aldes light commercial ventilators can fit almost anywhere and still provide easy access to the internal components for quick maintenance. The units also offer a choice of five continuous operation speeds and a demand-controlled high speed exchange mode.

KEY FEATURES

Electronically and independently adjustable supply and exhaust blowers (FlexControl).

Painted, heavy-gauge galvanized steel cabinets are attractive, rust-resistant and extremely durable.

Access doors on both sides of unit.

Doors on both sides of the unit to allow easy access to filters, cores and motors, no matter the installation constraints.

Fan exhaust frost protection, or optional recirculation defrost kit (factory installed or upgraded in the field).

Four highly efficient and noise reducing RadiCal centrifugal fans with EC motors from EBM Papst.

Units with polypropylene cores can be used for indoor pools and spas.
