

Product Description

The model MR Modulo Adjustable Constant Airflow Regulator is a modulating orifice that automatically regulates airflows in duct systems to constant levels. The passive control element responds to duct pressure and requires no electric or pneumatic sensors or controls.

The MR Modulo compensates for changes in duct pressure caused by thermal stack effect, building pressure, dust-clogged filters, etc. The MR Modulo also provides a quiet, low-cost solution to balancing forced-air systems for heating, air conditioning and ventilation, eliminating the need for on-site balancing. The MR Modulo will regulate airflow in supply, return, or exhaust duct systems. It can be mounted horizontally or vertically, and can be fitted in ductwork and accessories.

The active control element of the MR Modulo is a flexible bulb that inflates and deflates in response to the static pressure difference across the control. This operation regulates the free-area opening through the control, resulting in maintenance of velocity and specific airflow setpoints. Each MR Modulo is designed and produced for control of air in temperatures ranging from 14° to 140°F (-10° to 60°C).

Construction

The MR Modulo is constructed of PC / ABS plastic, and it is UL 2043 safety classified and labeled for flame and smoke generation. The assembly is sized to fit inside standard rigid round ducting, as well as fittings such as take-offs, tees, etc. A double-lip airtightness seal around the circumference ensures a tight, no-leak fit.

Installation

The MR Modulo will push-fit into circular ducts in close proximity to a take-off or a terminal. Mounting can be horizontal or vertical. The MR Modulo orientation must correspond to the airflow direction indicated on the device.

Warranty

Guaranteed for five (5) years, from date of shipment, against all defects in material or workmanship, provided that the material has been installed and used under normal conditions. This warranty is limited to the repair or replacement of the material.

MR MODULO

ADJUSTABLE CONSTANT AIRFLOW REGULATOR

AIRFLOW & ZONE CONTROL

Performance

The MR Modulo airflow regulators control airflow accurately to within ± 3 CFM ($5 \text{ m}^3/\text{h}$) for nominal airflow ≤ 30 CFM ($50 \text{ m}^3/\text{h}$) and $\pm 10\%$ for nominal airflow > 30 CFM ($50 \text{ m}^3/\text{h}$) throughout the target operating pressure range of 0.2 to 1.0 in. w.g. (50 to 250 Pa). Each diameter of MR Modulo regulator is available in multiple factory-calibrated setpoints (see performance curves). Field adjustment of airflow setpoints is achieved by twisting the integral rotating ring to the desired setpoint. No tools are required.

Maintenance

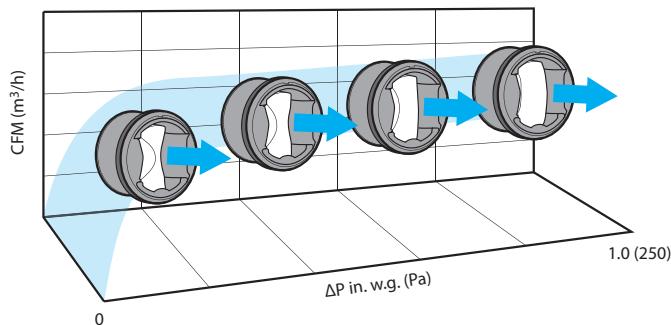

The MR Modulo needs no maintenance when used in normal conditions. There is no risk of dust deposits or obstruction because the MR Modulo has no airways subject to clogging. If the intended application includes air heavily loaded with grease or dust, a fitting with an access panel or door, such as that used for flame dampers, should be provided.

APPLICATIONS

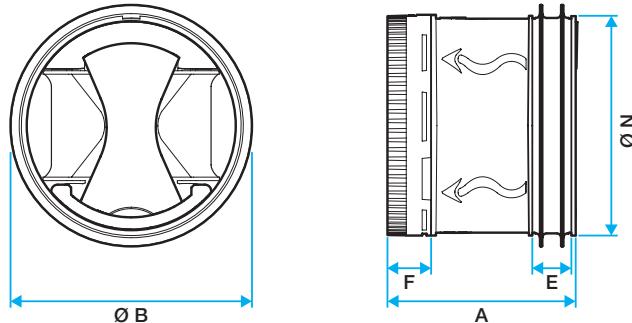

- Supply and exhaust air for offices
- Balancing exhaust and supply airflows in high-rise building duct risers
- Bathroom exhaust in nursing homes, hotels, motels, dormitories, apartments, offices, etc
- Clean room air supply balancing for ceiling filter modules. Maintains constant airflow, even as filter resistance increases
- Regulation of make-up air
- Balancing supply airflow from packaged roof-top A/C units
- Balancing supply and exhaust of heat recovery ventilation systems
- Regulating outdoor air injection from central supply fan into individual room fan coil units or heat pumps
- Balancing airflows on series-fan-powered terminal unit systems
- Supply air to sleeping quarters in military facilities, submarines, etc

How the MR Modulo Works

Constant airflow is achieved by the inflating action of the MR Modulo's bulb. At minimum static air pressure, the bulb is deflated and has a shape similar to an hourglass. As the static pressure increases across the bulb, it inflates, thereby reducing the free area around the bulb. At the same time, the higher static pressure increases the air velocity, resulting in CONSTANT AIRFLOW. This occurs regardless of pressure differences in the range of 0.2 to 1.0 in. w.g. (50 to 250 Pa). The air velocity in the duct is in the range of 60 to 700 ft/min. (0.3 to 3.5 m/s).

Construction

1. Removable clip
2. Regulating silicon membrane
3. Double-lip airtightness seal
4. Housing
5. Rotating airflow adjustment ring

Information indicated directly on the product:

- Flow direction, diameter, operating differential pressure range, part number, and date of manufacture
- Airflow setting range correlation table in CFM and m³/h

Recommended Specification

Model MR Modulo Adjustable Constant Airflow Regulators by American ALDES Ventilation Corporation, Bradenton, Florida, shall operate solely on duct pressure and require no external power supply. Each regulator shall be capable of being field adjusted to the required airflow setpoint, as indicated on the schedule, by twisting the rotating ring to the corresponding airflow set value. The device shall be rated for use in air temperatures ranging from 14° to 140°F (-10° to 60°C).

Constant Airflow Regulators shall be capable of maintaining constant airflow within ± 3 CFM ($5 \text{ m}^3/\text{h}$) for nominal airflow ≤ 30 CFM ($50 \text{ m}^3/\text{h}$) and $\pm 10\%$ for nominal airflow > 30 CFM ($50 \text{ m}^3/\text{h}$) throughout the target operating pressure range of 0.2 to 1.0 in. w.g. (50 to 250 Pa) differential pressure. Sound power levels shall not exceed those for each size and CFM rating as scheduled.

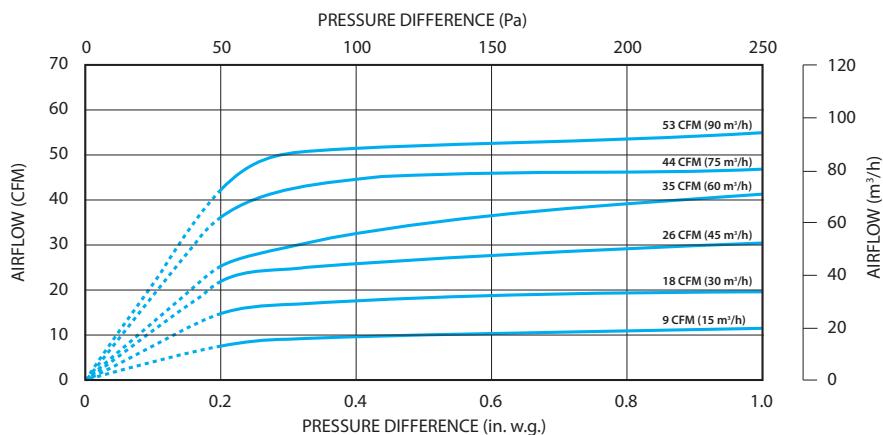

Regulators shall be provided as an assembly consisting of a PC/ABS plastic housing and regulating silicon membrane. A rotating adjustment ring shall allow for setting of airflow to calibrated setpoints. No tools shall be needed to set airflow. Each assembly shall be fitted with a double-lip airtightness seal in elastomer. All regulators must be classified per UL 2043 and carry the UL mark indicating compliance.

All MR Modulo Adjustable Constant Airflow Regulators will require no maintenance and must be warranted for a period of no less than five (5) years. MR Modulo Adjustable Constant Airflow Regulators shall be installed in tight ducting systems in accordance with all applicable codes and manufacturer's instructions.

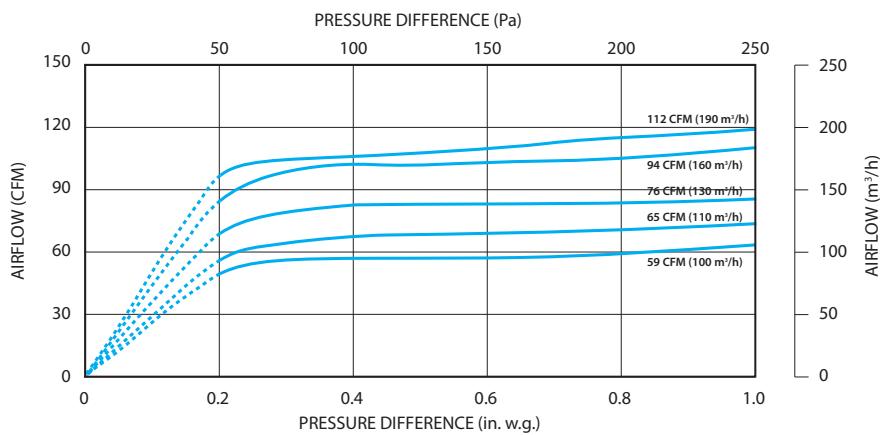

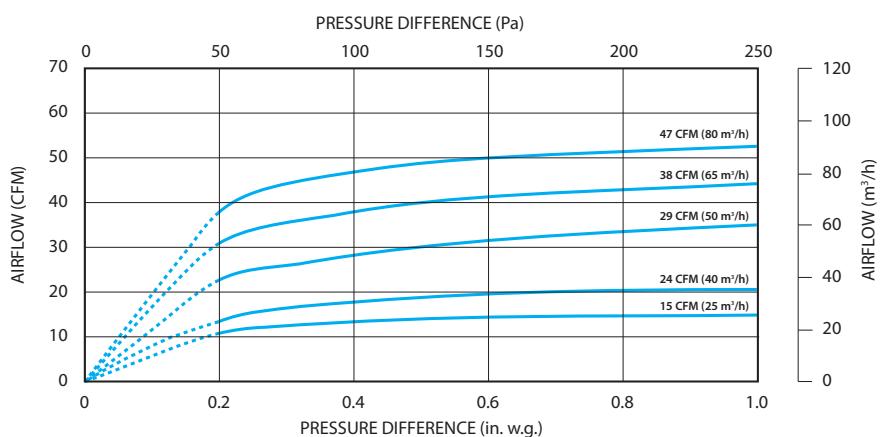

Airflow Performance Data

Performance charts reflect airflow variation for each size MR Modulo according to the pressure difference between upstream and downstream of the device. The MR Modulo is designed for the differential operating range from 0.2-1.0 in. w.g. (50-250 Pa). Airflow measurements taken at 68°F (20°C) at 1 atmosphere pressure. The MR Modulo regulates within the following nominal airflow tolerances: ± 3 CFM ($5 \text{ m}^3/\text{h}$) for nominal airflow ≤ 30 CFM ($50 \text{ m}^3/\text{h}$) and $\pm 10\%$ for nominal airflow > 30 CFM ($50 \text{ m}^3/\text{h}$). Sizes are nominal. Product is designed to be inserted into duct of indicated diameter.

Acoustic Data

Sound power levels of noise (Lw) at duct output. The following tables give the sound power levels of noise (Lw) expressed in decibels per octave (dB/oct) as well as the global sound power levels in dB(A) according to the pressure drop. These sound power levels are results of tests carried out by a Dutch independent laboratory (PEUTZ) and are given at the duct outlet. Measures were carried out in accordance with NF EN ISO 3741 and NF EN ISO 5135 norms, with an MR Modulo fitted into a duct with an upstream and downstream straight length equal to 3 diameters.
