Powered by unit, SSR control

Internal Pre-Heat by Hot Water Coil:

- Controlled by the unit
- Piping connections in front or back of the unit

Wheel Speed Variation:

VFD on the wheel

Exhaust Defrost:

- Supply air blower shuts down and outside air damper closes. Warm exhaust air defrosts the wheel for a factory-set duration.
- Includes motorized and insulated damper on fresh air intake (OA)

Recirculation Defrost:

- Exhaust air blower shuts down, outside air damper closes, exhaust air damper closes, and recirculation damper (included) opens. Warm exhaust air defrosts the wheel for a predetermined amount of time (see table at right)
- Includes motorized and insulated damper on fresh air (OA) and exhaust air (EA) intake
