## Frost Prevention/Control (Optional)

If no defrost mode is selected, it is the customer's responsibility to protect the wheel from freezing as needed.

Frost control activated by a temperature reference: 5°F (-15°C)

Internal Pre-Heat by Electric Coil:

Powered by unit, SSR control

Internal Pre-Heat by Hot Water Coil:

Controlled by the unit

· Front or rear piping connection

#### Wheel Speed Variation:

VFD on the wheel

#### **Exhaust Defrost:**

- Supply air blower shuts down and outside air damper closes. Warm exhaust air defrosts the wheel for a factoryset duration.
- Includes motorized and insulated damper on fresh air intake (OA)

#### **Recirculation Defrost:**

- Exhaust air blower shuts down, outside air damper closes, exhaust air damper closes, and recirculation damper (included) opens. Warm exhaust air defrosts the wheel for a predetermined amount of time (see table at right)
- Includes motorized and insulated damper on fresh air (OA) and exhaust air (EA) intake
